It is occasionally remarked that advertising increases the cost of goods even though such is disproven by experience both of the seller and the buyer. On this point G. W. Hopkins, of New Fork, sales manager of a large biscuit company declares: Advertising as a general rule, helps to reduce the cost of goods. The money spent on "ads" in America totals \$616,000,000 or \$6.85 per capita, each year. By reason of greatly increased sales, advertising tends to reduce the cost, per article, of manufacturing and marketing and the consumer gets the benefit. Mr. Hopkins also points out that of the business failures last year 84 per cent, had been found to be men or firms not advertising. Likewise the idea that goods, or a business house may become so well known as not to need advertising shows a serious mistake in that
